

Tank Care Buddy

Session 1 — App Launch & First Feature Set

May 17, 2026

The app was created from scratch and given its first real features: Supabase cloud sync, a Japanese koi pond visual theme, a tank-health advisor, a reminders system, a fish species database with trend graphs, and a water change calculator with dose verification.

Repository: [jtsmith7234-rgb/my-tanks](https://github.com/jtsmith7234-rgb/my-tanks)

App created — first working version

Commit: 79434988

- Built the core app: add tanks, log water changes, view history.
- Supabase cloud sync wired in so data saves to the cloud.

Redesign — iOS Liquid Glass look

Commit: e0608b58

- Gave the app a frosted-glass, glowing iOS-style appearance.
- Added soft light blobs, inner highlights, and smooth motion.

Japanese Koi Pond theme

Commit: d523e0d4

- Moonlit pond background with cherry blossom petals drifting across the screen.
- Sakura pink + koi orange accent colors, Noto Serif JP font.

New koi app icon

Commit: 4afc2776

- Orange/white/black sanke koi fish in dark water with sakura petals.

Tank health advisor added

Commit: 766b453f

- Advisor reads your logged water parameters and flags problems.
- Uses expert freshwater care rules to surface alerts.

Reminders system

Commit: 8ac26b47

- Per-tank notification reminders for water changes and care tasks.

Fish species database + parameter trend graphs

Commit: baa431f9

- Freshwater species database added.
- Graphs show pH, ammonia, nitrite, nitrate trends over time.

Dose verification in water change calculator

Commit: 961de235

- Calculator now asks you to confirm each chemical product dose before saving.

Chemical library + First Tank Mode walkthrough

Commit: 16a8f9de

- Built-in library of common aquarium chemicals and treatments.
- First Tank Mode guides new users step-by-step through setting up their first tank.
