

Tank Care Buddy

Session 11 — Theme-Aware Logo Mark

June 11, 2026

Removed the filled teal square badge behind the header logo in both the app and the website. Replaced it with a clean transparent mark that sits naturally beside the 'Tank Care Buddy' text as a brand lockup. The mark swaps between a teal version (for light themes) and a white version (for dark themes) so it always matches the contrast of the header text next to it.

Theme-aware logo mark: remove teal badge, clean lockup on all themes

Commit: [f878051](#)

- Added logo-mark-dark.png — teal fish mark on a fully transparent background. Used by default on light themes (Tropical Pop, Planted, Clean). Extracted from the V5 1024px app icon master.
- Added logo-mark-light.png — white fish mark on a fully transparent background. Used on the dark theme (The Deep / midnight-reef).
- Removed border-radius: 7px and box-shadow from .topbar-logo-img so the logo no longer looks like a standalone app icon tile.
- Logo mark sits directly beside the 'Tank Care Buddy' title text with only a gap — no badge, no background plate, no colored tile behind it.
- CSS content-swap on data-skin='dark': the browser automatically loads logo-mark-light.png instead of logo-mark-dark.png. No JavaScript required.
- Mark size reduced from 30px to 26px to sit at the visual weight of a brand mark rather than an icon button.
- Files changed: index.html, styles.css. Version bumped to v=20260611a.

Theme-aware logo mark: remove badge, clean lockup on light + dark

Commit: [c20f25c](#)

- Added logo-mark-dark.png and logo-mark-light.png — same assets as the app, copied to the website repo root.
- shared.js: changed the header img src from apple-touch-icon.png (solid teal square) to logo-mark-dark.png (transparent mark). Updated both header and footer logo lockups. Updated aria attributes (alt='', aria-hidden='true') since the adjacent text already labels the brand.
- style.css: removed border-radius and box-shadow from .site-logo-mark.

- CSS content-swap on [data-theme='dark'] and @media (prefers-color-scheme: dark): automatically loads logo-mark-light.png on dark theme.
- Mark size reduced from 32px to 28px.
- Files changed: shared.js, style.css.

Implementation note: theme-aware contrast

The CSS 'content' property on an img element is a supported technique in all modern WebKit/Blink browsers (Chrome, Safari, Edge). It replaces the image source when the selector matches, with no JavaScript or extra DOM elements needed. The two mark PNG files are 96×96px, extracted from the 1024px icon master by isolating the white/bright pixels (brightness threshold 120/255) and re-filling them as teal (#007878) or white (#ffffff) on a transparent background.
