

Tank Care Buddy

Session 11C — Correct Brand Mark (Tank + Fish)

June 11, 2026

Two earlier sessions replaced the logo with first a PNG badge, then a standalone fish navigation icon. Both were wrong. The real brand mark is the tank rectangle with the fish inside — the same shape visible on the app icon. This session replaced both the app and website logo mark with a hand-drawn SVG of the correct shape: rounded rectangle tank, wavy water line, fish body with tail and eye dot. The SVG uses `currentColor` throughout so it automatically matches the header text on every theme with no extra CSS rules.

Brand mark: correct tank+fish SVG, sized to title height

Commit: 9b9348a

- New SVG brand mark: rounded rectangle tank outline ($rx=4$), wavy water line across the top third, fish body ellipse ($rx=12$ $ry=7$) below the waterline, V-shaped tail fin on the left, filled eye dot on the right.
- SVG `viewBox` is 0 0 56 44 (matches the 56:44 aspect ratio of the icon art). Rendered at 28x22px in the header so the height is proportional to the 18-19px Plus Jakarta Sans 800 title text.
- Uses `stroke=currentColor` and `fill=currentColor` throughout — automatically teal/cyan on dark themes and dark ink on light themes. No CSS overrides or PNG swaps needed.
- Updated `index.html`: replaced the nav fish icon SVG with the new tank+fish SVG in the static h1.
- Updated `app.js` `setTitleText()`: same replacement so the dynamic title injection also uses the correct mark.
- Updated `styles.css`: `.topbar-logo-mark` `width=28px` `height=22px`.
- Version bump: `v=20260611c`.

Brand mark: correct tank+fish SVG, sized to title height

Commit: d2d22bf

- `shared.js`: replaced the fish nav icon with the same tank+fish SVG in both the header and footer brand lockups.

- style.css: .site-logo-mark updated to width=26px height=20px (proportional to the smaller --text-sm logo text on the website).
