

Tank Care Buddy

Changelog — June 11, 2026 — Session 11E · v=20260611e

Date	June 11, 2026	Version	v=20260611e
App Commit	3f9ed52	Site Commit	n/a (app-only change)

What Changed

fish-only.png added to app repo	Extracted the solid fish body (no tank rectangle, no wave line) from app-icon-default-1024.png. Same teal channel isolation method as logo-mark.png, then masked to exclude: left/right tank walls (cols < 210, > 820), top bar and wave line (rows < 390), bottom bar (rows > 685). Cropped to fish bounding box with 15px padding. Native size: 459 x 288 px, white mark, transparent bg.
browse-species button — SVG replaced with fish-only.png	index.html line 74: the outline fish SVG (stroke-based) was removed and replaced with an img tag using fish-only.png and class fish-btn-icon. The button structure, ID, and aria-label are unchanged.
styles.css — .fish-btn-icon rules added	.fish-btn-icon renders at 20x20 px (same as .btn-icon). filter:invert(1) on light themes so the white mark appears dark. filter:none on dark theme (midnight-reef) so the mark stays white. opacity 0.85/0.9 for visual weight matching the other topbar icon buttons.
Cache-bust bumped v=20260611d to v=20260611e	index.html query-string version updated on styles.css, advisor.js, and app.js.

Files Touched

Repo	File	Change
app	fish-only.png	New — fish body only, no tank, no wave
app	index.html	browse-species-btn img tag + v=20260611e
app	styles.css	.fish-btn-icon sizing + theme filter rules

Why It Changed

The browse-species button was using a generic outline fish SVG unrelated to the brand mark. User requested that this icon be replaced with the same fish from the brand logo — the solid filled fish body extracted from the app icon — to create visual consistency between the logo header mark and the nav button. The tank rectangle is intentionally excluded since the logo context already provides the 'tank' framing.

Licensing Impact

None.

fish-only.png is derived from the proprietary Tank Care Buddy app icon. No third-party image licenses involved. No attribution required.

Deferred Items

- Capacitor packaging — not started, do not begin
- App Store prep — not started, do not begin
- Website placeholder fills (privacy date, App Store link) — pending

Recommended Next Step

Verify live render

Hard-refresh the app at ?v=20260611e and confirm the browse-species button shows the solid fish in both light and dark themes. Verify size matches the + button next to it. Then consider whether any other SVG icons should be updated to match the brand language.
