

# Tank Care Buddy

Changelog — Build v20260611i · June 11, 2026

## ▣ NEW FEATURE: Equipment & Maintenance Dashboard

Commit: 2f5ed4f | Branch: main | Files: 4 changed, 1 new

## What Shipped

A new Equipment tab on every tank lets users track all their gear and get reminded when maintenance is due — without building a product catalog or pushing complex forms at them.

### equipment.js (new file — 598 lines)

- 11 equipment types with researched default maintenance intervals (filter, heater, light, UV sterilizer, test kit, CO2, air pump, powerhead, filter media, dosing, other)
- Subtypes per type: sponge / HOB / canister / internal filters; LED / fluorescent lights; liquid / strips test kits; CO2 cylinder / diffuser; mechanical / biological / chemical filter media
- Full CRUD: addItem, updateItem, archiveItem, deleteItem
- markServiced(id) and markReplaced(id) — auto-roll nextServiceDate and nextReplacementDate forward from the action date
- itemStatus(item) returns status code + label + daysUntil: ok | due\_week | due\_month | overdue | expiring\_soon | expired | archived | no\_schedule
- dueList(tankId, window) — filters by 'week', 'month', 'upcoming', or 'all'
- tankSummary(tankId) — { dueThisWeek, dueThisMonth, overdue, expiringSoon, total }
- addNote(id, text) + getHistory(itemId) — per-item event log
- Storage: tm.equipment.v1 (items) + tm.eqevents.v1 (history) via window.store

### app.js (renderEquipment + bindEquipment + modal helpers)

- renderEquipment(t) — summary chips bar, filter pill strip, equipment cards, empty state, archived toggle, + Add button
- Summary chips: overdue / due this week / expiring soon / all caught up (only visible chips shown)
- Filter strip: This week | This month | Upcoming | All (default: This month)
- Equipment card: type + subtype chip, item name, brand/model (optional), status chip (colored), due-date line, action buttons
- Card actions: Mark done (or Replace / Check & swap by kind), Edit, ... (more)
- Add flow: type picker grid → subtype picker (if applicable) → pre-filled form with guidance copy
- Form fields: name, brand/model (optional), install date, service interval (days), replacement interval (days, if applicable), expiry date (expiry-based types), notes

- Edit modal: same form pre-populated with existing item data
- More modal: Add a note / Archive or Restore / Delete
- Empty state: friendly copy + encouragement to add first item
- Archived items: hidden by default, 'Show N archived' toggle at bottom
- bindEquipment wires all buttons — mark/edit/more fire surgically without full re-render unless needed

### renderTank() (tab wiring)

- Equipment added as the 5th tab alongside Details / Fish / Water Care / History
- Tab render and bind calls follow the same pattern as all other tabs

### \_renderEqHint(t) (home card hint)

- Quiet one-line hint below tc-meta on every home tank card
- Shows: X equipment item(s) overdue (red) / X due this week (orange) / X expiring soon (orange) / X due this month (gold) / Equipment all caught up (green)
- Only appears when at least one item is tracked for that tank; completely invisible with no equipment added

### index.html (version bump)

- Added: before app.js
- Bumped all version strings from h → i across all script and stylesheet tags

### styles.css (new equipment CSS block)

- eq-summary-bar + eq-chip variants (bad/warn/soon/expiry/ok)
  - eq-filters pill strip + eq-filter-btn active state
  - eq-card + per-status left-border accents
  - eq-card-top layout, eq-type-chip, eq-card-name, eq-card-brand
  - eq-status-chip variants (ok/warn/soon/bad/expiry/neutral)
  - eq-due-line, eq-card-actions
  - eq-add-btn full-width row
  - eq-empty empty state
  - eq-archived-toggle
  - eq-type-grid (3-col add modal picker)
  - eq-type-pick-btn with active/focus state
  - eq-form-guidance teal info box
  - eq-more-list / eq-more-row / eq-more-delete
  - tc-eq-hint variants (bad/warn/soon/ok) for home card
-

## QA Results

41 / 41 assertions passed in Node.js harness.

| Area                           | Assertions | Result |
|--------------------------------|------------|--------|
| TYPES catalog                  | 3          | ☐      |
| addItem + getItem              | 5          | ☐      |
| itemStatus codes               | 2          | ☐      |
| markServiced date roll         | 3          | ☐      |
| markReplaced date roll         | 3          | ☐      |
| test_kit expiry-based          | 2          | ☐      |
| Overdue detection              | 2          | ☐      |
| tankSummary                    | 2          | ☐      |
| dueList windows                | 2          | ☐      |
| archive / restore              | 4          | ☐      |
| addNote + getHistory           | 2          | ☐      |
| deleteItem                     | 1          | ☐      |
| getItems active-only           | 1          | ☐      |
| upcoming excludes overdue      | 1          | ☐      |
| empty tank summary             | 1          | ☐      |
| updateItem patches             | 2          | ☐      |
| getAllItems cross-tank         | 1          | ☐      |
| no_schedule (expiry + no date) | 1          | ☐      |
| UV + CO2 defaults              | 2          | ☐      |
| other type no-crash            | 1          | ☐      |

## Design Decisions

No product database: v1 does not build any brand/SKU/model lookup. Users name their gear themselves. Guidance text is type-level, not model-specific.

Prefilled intervals, not locked: Every interval is editable. Defaults come from manufacturer docs and community guidance but users can override freely in the form.

Status is singular: itemStatus returns the soonest upcoming action (service, replace, or expiry) — one chip, one due line, one action button. No overwhelming multi-row breakdowns.

Archived ≠ deleted: Archived items are hidden but preserved. Users can restore them. Delete is behind the ... menu + a confirm dialog.

Home card hint is quiet: tc-eq-hint appears only if items are tracked, and only shows the most urgent signal. It does not clutter the card when no equipment is added.

Filter defaults to This month: Most useful window for regular maintenance. Week would be too narrow for a new user; All would overwhelm with items not yet due.

Deferred (not in this build)

- Push/local notifications for overdue equipment (requires Capacitor — deferred per scope)
- Per-item history detail view (full event log with timestamps)
- Advisor integration: equipment overdue → advisor banner rule (natural v2 extension)
- Export / backup of equipment data in JSON export
- Duplicate item shortcut (e.g., 'Add another sponge filter')

Commit Summary

Recommended next step: Advisor Integration — flag overdue equipment in the advisor banner

The most natural v2 extension: add an equipment rule to computeAdviceList() that surfaces 'X item(s) overdue' or 'Filter service due this week' as an advisor banner. This connects the equipment layer to the existing advisor/notification system without new infrastructure.
