

Tank Care Buddy

Changelog — June 11, 2026 — Session 11F · v=20260611f

Date	June 11, 2026	Version	v=20260611f
App Commit	1042311	Scope	App only — topbar CSS polish

What Changed

Brand lockup — logo mark enlarged	topbar-logo-mark: 27x22px → 30x25px. Proportionally larger to anchor the center lockup visually.
Brand lockup — title size + tracking	topbar-brand and topbar h1: font-size 18px → 20px. letter-spacing -0.02em → -0.03em for a tighter, more intentional typographic feel. Applied in both the brand state and inner-screen state, and synced in the clean theme override.
Brand lockup — tighter logo/text gap	Gap between logo mark and title text: 8px → 6px. The lockup now reads as one cohesive unit rather than two elements floating near each other.
Buttons — reduced footprint	ghost-btn and ghost-btn-lg unified: both now 38x38px (down from 40x40 base / 46x46 lg). The -lg class no longer upscales — both use the same size to reduce visual weight and let the brand lockup dominate.
Buttons — lighter border + fill	Border: 1px solid rgba(255,255,255,.14) — lighter and less competitive than the previous glass-stroke. Background: rgba(255,255,255,.04) — near-invisible, almost ghosted. box-shadow removed from ghost buttons — surface is cleaner without it.
Buttons — refined border-radius	16px → 13px. Still rounded and friendly, but less boxy and less dominant.
Buttons — refined hover state	Hover now uses rgba(255,255,255,.10) + rgba(255,255,255,.28) border — soft and theme-agnostic. Removed the sakura/accent color bleed on hover which drew too much attention.

Icons — reduced size + opacity	btn-icon SVG icons: 20 → 18px. fish-btn-icon PNG: 20 → 18px. All icons gain opacity: 0.75 (SVG) and 0.70/0.75 (fish PNG light/dark). Icons recede into the background, making them feel like controls, not focal points.
Topbar layout — tighter gap + padding	Inter-element gap: 6px → 4px. Horizontal padding: 12px → 10px. Slightly more breathing room distributed toward the center lockup.
Clean theme — synced	Clean theme ghost-btn border thinned (1.5px → 1px), border-radius synced to 13px, h1 font-size synced to 20px with -0.03em letter-spacing.

Before / After Summary

Element	Before	After
Logo mark size	27 x 22 px	30 x 25 px
Title font-size	18 px	20 px
Title letter-spacing	-0.02em	-0.03em
Logo/title gap	8 px	6 px
Button size (lg)	46 x 46 px	38 x 38 px
Button border-radius	16 px	13 px
Button border	1px glass-stroke	1px rgba white 14%
Button fill	rgba white 5%	rgba white 4%
Button box-shadow	glass-shadow-sm	none
Icon size (SVG)	20 px	18 px + opacity 0.75
Icon size (fish PNG)	20 px	18 px + opacity 0.70
Topbar gap	6 px	4 px
Topbar horiz padding	12 px	10 px

Files Touched

File	Change
styles.css	11 rule blocks updated: topbar, ghost-btn, ghost-btn-lg, btn-icon, fish-btn-icon, topbar-brand, topbar-logo-mark, clean theme overrides

index.html	Cache-bust bumped v=20260611e to v=20260611f
------------	--

Why It Changed

The topbar felt too generic — equally weighted across all elements, too boxy, and not premium enough. The center brand lockup had no visual advantage over the utility buttons. This pass re-establishes hierarchy: brand center = primary, controls = receded secondary. No structural redesign — only sizing, weight, opacity, and spacing values were adjusted.

Licensing Impact

None.	CSS-only change. No new assets. No third-party licenses involved.

Deferred Items

- Capacitor packaging — not started
- App Store prep — not started
- Website placeholder fills (privacy date, App Store link) — pending

Recommended Next Step

Next	Hard-refresh at ?v=20260611f and review in all four themes (midnight-reef, tropical-pop, planted, clean). Confirm center brand lockup reads as the dominant focal point and utility buttons feel receded. If any button feels too small for tap targets, report and we can nudge the hitbox without changing the visual size.
