App Commit	265e514	Site Commit	365b241
App Repo	jtsmith7234-rgb/tank-care-buddy	Site Repo	tank-care-buddy-site

What Changed

logo-mark.png added to both repos	Extracted white solid fish-in-tank mark from app-icon-default-1024.png using teal channel isolation (teal_score = G+B-2R; pixels below threshold become opaque white mark, teal BG becomes transparent). Cropped to mark bounding box (rows 225-761, cols 182-841), output 116×96 px PNG with full alpha channel.
App header updated — topbar-logo-mark	index.html: replaced placeholder text/SVG with an img tag (src=logo-mark.png, class=topbar-logo-mark). app.js setTitleText(): injects same img tag on home screen so dynamic title updates preserve the mark.
App styles.css — theme-aware contrast	.topbar-logo-mark rendered at 27×22 px (height matches Plus Jakarta Sans 800 cap-height). filter:invert(1) on light themes (tropical-pop, planted, clean). filter:none on dark theme (midnight-reef / data-skin='dark'). Mark hidden automatically on non-home views via #title:not(.topbar-brand) rule.
Website shared.js — brand mark in site header	LOGO_SVG const now uses an img tag with absolute URL https://tankcarebuddy.com/logo-mark.png (falls back to relative path on localhost). Class site-logo-mark applied for CSS targeting.
Website style.css — theme-aware contrast	.site-logo-mark rendered at 24×20 px. filter:invert(1) default (light). [data-theme='dark'] and @media(prefers-color-scheme:dark) override to filter:none (white mark).
Cache-bust bumped v=20260611c → v=20260611d	index.html query-string version updated on styles.css, advisor.js, and app.js references.

Files Touched

Repo	File	Change
tank-care-buddy	logo-mark.png	New — extracted brand mark asset
tank-care-buddy	index.html	img tag + version bump → v=20260611d
tank-care-buddy	app.js	setTitleText() injects logo-mark.png img
tank-care-buddy	styles.css	.topbar-logo-mark sizing + invert filters
tank-care-buddy-site	logo-mark.png	New — same asset, served from tankcarebuddy.com
tank-care-buddy-site	shared.js	LOGO_SVG uses img tag with absolute URL
tank-care-buddy-site	style.css	.site-logo-mark sizing + invert filters

Why It Changed

Previous sessions (11B, 11C) used incorrect marks — first the fish nav icon (wrong shape), then a hand-drawn outline SVG tank (correct concept, wrong style). The user confirmed the app icon art (teal square, white solid fish-in-tank mark) was the correct reference. This session extracted the actual mark pixel-for-pixel from the 1024px master icon PNG, removing the teal background to leave only the white mark on transparency.

CSS `filter:invert(1) / filter:none` provides theme contrast without maintaining two separate image assets per theme. The mark stays white-on-dark for dark mode and dark-on-light for light mode — matching the app's four skin system (midnight-reef = dark; tropical-pop, planted, clean = light).

Licensing Impact

None.	logo-mark.png is derived from the proprietary Tank Care Buddy app icon, created for this project. No third-party image licenses are involved. No attribution required.
-------	--

Deferred Items

- Capacitor packaging — not started, do not begin
- App Store prep — not started, do not begin
- Website placeholder fills (privacy date, App Store link) — pending
- advisor.js version string — remains at v=20260611c in file body (no in-file version const; only index.html query param updated)

Recommended Next Step

Verify live render

Hard-refresh the app in Safari (or force-reload via GitHub Pages URL with ?v=20260611d) and confirm logo-mark.png loads correctly in both light and dark themes. Check that the mark scales flush with the 'Tank Care Buddy' title text on the home screen. Then verify the website header at tankcarebuddy.com shows the same mark at 24×20 px.
